ABSTRACTED-PUB-NO: DD 256515A

BASIC-ABSTRACT:

Alcohols, esp. a mixt. of 1-5C alcohols, are prep'd. from synthesis gas, at 7 MPa and 553-573 deg.K, in a high pressure reactor, using a CuO/ZnO/Al₂O₃ catalyst precursor which has been ground with 0.1-10 wt% of metallic Cu, to grain size 1-5 microns, and then tabletted. The upper third of the layer in the reactor contains a catalyst with high content of metallic Cu, and the lower third comprises a catalyst with low content of Cu powder.

The catalyst precursor has been ground with 1-5 wt% of metallic Cu powder. The upper third of the catalyst layer is a catalyst with 3-10 (4-6) wt% of metallic Cu, and the lower third contains 0.1-3 (1-2) wt% of Cu powder.

ADVANTAGE - Space/time yield is better, and the catalyst has long life.
